

ADVANTAGES

- Designed to protect test technicians from potential exposure to the contaminated airflow
- Incorporate scanning technology designed to scan the entire face of the tested filter element, including the gasket interface
- Validated and documented to operate per ASME N-510 (Testing of Nuclear Air Treatment Systems) and the ASME AG-1 Code requirements
- Test sections are available in modules up to three filters wide.
- Specially designed to mount directly to other Camfil containment modules ensuring complete system integrity from a single source manufacturer
- Manufactured from the same materials as the containment section
- Tested to the same design criteria as the other containment sections
- Enables individual filter testing

Application

Bio-safety and nuclear applications.
